

## **Location Recording Plan**

The Aim for this is to record a 70 person choir in an acoustical location. Location is set to be in the Rothes Halls in Glenrothes. This is currently scheduled for Thursday the 28th of April. The aim is to record a location based recording that can show the properties of a stereo feed as well as the acoustical properties of the location

The choir is an group of 70 people with a choir leader with no other instrumentation then their voices. The choir is sectioned into groups of Sopranos, altos and tenors. They will be covering songs from the modern era.

To record the choir, I would be using a spaced pair with the mics setup at a distance from each other to capture the performers so that they will be picked up clearly and their positions will be well defined. Looking at the Mic choice for this, I could use the Neumann U87s for the distance spaced pair.

## **Required Kit List**

2x u87

4x Xlr

2x Mic stands

1x Tascam recorder
